

**Landscape of Research Output of  
Universities and other Research  
Institutes in India**

**A Report based on  
Indian Citation Index**

**2015**

# Index

1. Foreword
2. Background
3. Ranking
4. Global Scenario of Ranking System
5. Higher Education in India
  - i. The supply-demand gap
  - ii. The low quality of teaching and learning
  - iii. Constraints on research capacity and innovation
  - iv. Uneven growth and access to opportunity
6. About 'Indian Citation Index (ICI)'
7. Scope of study
8. Objectives of study
  - 1 Analyze journals published from India covering following aspects
  - 2 Analyze citation trends of journals published from India
    - i. What are the unique points of citations in Indian journals/publications?
    - ii. Are Indian journals as vigorous as international ones?
  3. Relative standing or position of Indian Institutes/universities
  4. Research Journals published from India
9. Methodology
10. Section 1.0 Journals Published from India
  - i. Difference in journals published from India and foreign countries: in presentation, lucidity of language, graphic description, etc.
  - ii. Defining an International Journal
  - iii. Defining a National Journal
  - iv. Quality of a publication/article
    - 1.1 Quantum of foreign collaborative research articles in journals published from India
    - 1.2 Comparison of foreign (International) & Indian journals
11. Section 2.0 Analyze Citation Trend of Journals Published from India
  - 2.1 What are the Unique Points of Citations in Indian Journals?
  - 2.2 Are Indian Journals as Vigorous as International ones?

12. Section 3.0 Relative Standing or Position of Indian Institutes and Universities
  - 3.1 Indian Institutes of Technology (IITs): Analysis of Research Productivity and Quality
  - 3.2 National Institutes of Technology (NITs): An Analysis of Research productivity and Quality
  - 3.3 Trends Analysis of Central Universities
  - 3.4 Trends Analysis of State Universities
  - 3.5 Trend Analysis of Deemed Universities
  - 3.6 Trend Analysis of private Universities
13. Section 4.0 Research Journals Published from India
  - 1.1 Subject wise research journals/publications published from India
  - 1.2 State wise list of journals published from India
  - 1.3 Cities wise list of journals published from India
  - 1.4 Indian journals published and acquired by foreign publisher
14. Limitations

## Foreword

There can be several ways of looking at the research output of a nation. The most visible and tangible proof of the competitiveness of research by any community is the level and kind of new products and services it is able to create for the betterment of its people. Another way is looking at the citation count of research papers. While most international indices look at citation count in international journals, citations in local journals often get overlooked. A citation index for Indian journals has been the crying need of the hour and I am happy to see this need fulfilled.

The aim of the present study is to look at the research output of our institutions on the basis of citations in Indian journals. There are several reasons why this perspective is important and this study adequately analyses them. The timing for such a study is ripe since India is now working on its own national rankings of academic institutions. While they will cover all aspects of higher education, from both input and output side, indices of the kind presented in this report will provide another, supplementary perspective on our institutions. The analysis groups institutions of similar lineage and size, such as IITs, NITs, Central Universities, State Public Universities, Deemed Universities and State Private Universities.

This is the first edition of what is proposed to be an annual publication and has been conceptualized by the Confederation of Indian Industry (CII) to assist policy makers in analysing the impact of research funding provided to academic institutions. I would like to thank and congratulate the entire team at Indian Citation Index (ICI) for helping with the analysis and presenting such an exhaustive and comprehensive report.

### **Vijay Thadani**

Chairman, CII National Committee on Higher Education &  
Vice-Chairman & Managing Director - NIIT Limited &  
Co-Founder, NIIT University

Table 3.6 (i) Research Productivity of Category 'A' Private Universities (Annexure - 8)

Table 3.6 (iii) Research Productivity of Category B Private Universities (Annexure - 9)

## Highlights

The report is a first time endeavor to landscaping of research productivity of Indian universities and institutes based on 'Indian Citation Index (ICI) data 2004 -2014.

The report in addition to background, objectives, scope, and methodology, etc. contains four sections, namely Journals Published from India; Analyze Citation Trend of Journals Published from India; Relative Standing or Position of Indian Institutes/Universities; and Research Journals Published from India.

It broadly lists the number of higher educational institutions in the country and indicates the lacunae of journals publishing quality in terms of presentation, language, and rigor, etc., published from India and foreign journals respectively.

There is visible difference in periodicity of journals published from foreign countries and India. Foreign journals with Half Yearly, Quarterly, Bimonthly, Monthly, Fortnightly, Weekly, are on higher side than than that of India. Journals of Indian origin are relatively more with Half Yearly & Quarterly frequencies and there is no research journal available with Weekly, (52 Issue/Annum), 5 Issue/Annum, 8 Issue/Annum, 10 Issue/Annum, 14 Issue/Annum, and Irregular (No defined Frequency) in Indian Citation Index (ICI).

As we all know that science/ knowledge is universal but its applications are used to deal with issues of local and applied nature. Following this premise, scholars are in general free to work with physically or remotely and publish their work in journals, etc. across the globe irrespective of institutes and countries location. It is known as collaborative work that may be national or international. The collaborative research articles published in journals of Indian origin and indexed in Indian Citation Index (ICI) are 629840 from 174 countries and citations received to them are 347454. Here, the number of articles count exceeds to total source articles available in ICI database. This is because there are multiple authors to an article which may belong to different countries but as a count that single article/citation will be counted for each author and country too.

The top ranking countries having more than 2000 collaborative research articles are 17 in number. The collaborative articles of these countries in order of their ranking are from: China (14790), United States of America (14363), Iran (12131), Nigeria (6966), Turkey (6954), United Kingdom (5369), Malaysia (4223), Saudi Arabia (3801), Egypt (3446), South Africa (2840), Japan (2793), Canada (2585), South Korea (2516), Pakistan (2438), Australia (2415), Germany (2399), Bangladesh (2346) and rest have less than 2000 articles in collaborative research output published in journals of Indian origin.

For citations received to collaborative articles from different countries, there are only six countries which have received more than 2000 citations, viz: USA (7402), Iran (3396), China (3011), UK (2779), Turkey (2774), Nigeria (2077) and rest 168 countries have received less than 2000 citations.

The articles published from India in Indian and foreign journals are 52.35% and 47.76% respectively. First time, this report has defined the characteristics of 'International' and 'National' or Local journals to remove existing misconceptions of the people and set out the required quality parameters of scholarly works.

Apparently, higher learning institutes/universities, etc. need 12 to 15 years time span in getting maturity and achieving desired goals of research and innovation. Keeping this factor in mind, and have a level playing field for comparison and evaluation, the IITs, NITs, Universities, etc. established till the year of 200 are grouped as category 'A' and IITs, NITs, and Universities established from 2001 onwards are grouped in 'B' category.

The 'Engineering Science and Technology' and 'Chemistry' are the two subjects wherein all the IITs have made good, consistent, and visible contributions relative to other subject categories. However, in the subject category of 'Engineering Science and Technology, IIT Roorkee stands at first position with 470 research papers, followed by IIT Madras with 425 research papers, and IIT Kharagpur with 404 research papers and occupy second and third positions respectively. The category 'B' IITs (established from 2001 – 2014) contribution looks very insignificant as none of the IITs of this category published even 50 research articles. This clearly indicates that any academic institution of higher education needs 12 – 15 years gestation period.

NITs core subject is 'Engineering Science and Technology' with 1580 research papers, followed by Chemistry with 532 research papers, & Material Science with 355 research papers. After the core subjects, NITs have made good contribution in four subjects, i.e. Physics with 214 research papers, Environmental Science with 245 research papers, Earth and Geological Science with 216 research papers and Computer Science and Technology with 225 research papers. NITs of 'B' category similar to IITs 'B' category did not make visible contribution and that seems to be of their age. The NIT Delhi, NIT Goa, NIT Meghalaya, NIT Mizoram and NIT Nagaland did not have contribution of even a single research paper and all these five NITs established in the year 2010.

The research productivity of Central Universities is relatively better and among 'A' category, University of Delhi is on top with 1993 articles followed by AMU with 1968 articles, BHU with 1766 articles, University of Allahabad with 1199 articles, Dr. Harisingh Gour University (HGU) with 1054 article, and so on. In terms of citations received, AMU occupy top position with 1290 citations, followed by BHU with 1269 citations, University of Delhi with 1161 citations, and so on. Category 'B' did not make much visible contribution.

Among State Universities, Punjab Agricultural University (PAU) is on top with 6210 articles and 4335 citations, followed by Annamalai University with 5222 articles and 3619 citations. In case of 'B' category State Universities, first five positions in terms of articles and citations are occupied by Junagadh Agricultural University (JAU), Anand Agricultural University (AAU), Guru Angad Dev Veterinary and Animal Sciences University (GADVASU), University of Agricultural Sciences Raichur (UAS Raichur) respectively, and Rajmata Vijayaraje Scindia Krishi Vishwa Vidyalaya (RVSKVV). These are all Agricultural Universities, whereas in case of general universities research productivity is low.

Deemed Universities are making good contribution and first three positions in rank are occupied by ICAR institutes, i.e. IARI, IVRI and NDRI with 6910, 4124, 3016 articles and 7985, 2614, 2236 citations respectively. Category 'B' Deemed Universities have low research productivity.

Private Universities have come up in good number but their research articles share is very low. There are only two universities which have contributed more than 400 research articles, i.e. S R M University (SRMU) with 440 articles and 113 citations, and Presidency University (PU) with 416 articles and 264 citations. Presidency University output in terms of quality is on top in 'A' category. Among 'B' category private universities research output in terms of quantity and quality is low as only two universities have made more than three hundred articles contribution.

In India, about 1200 – 1300 good peer reviewed journals covering all subjects are available and considered indexable in Indian Citation Index (ICI). Currently, 900 + journals of all subjects are indexed with data depth of 2004 onwards. A list of Journals indexed in ICI along with subject category and their respective publisher (s) is given to understand all from different angle.

The top 10 States in terms of journals publishing are, Delhi (369), Maharashtra (148), Uttar Pradesh (68), West Bengal (59), Tamil Nadu (47), Karnataka (37), Andhra Pradesh (25), Kerala (24), Rajasthan (21), Madhya Pradesh (20). There are 11 States, viz: Andaman and Nicobar Islands, Arunachal Pradesh,

Chhattisgarh, Dadra and Nagar Haveli, Daman and Diu, Goa, Lakshadweep, Manipur, Mizoram, Nagaland, Tripura which do not publish any journal.

Ten Cities of India, i.e. Delhi (42), New Delhi (327), Mumbai (112), Kolkata (57), Bengaluru (25), Chennai (25), Hyderabad (16), Pune (13), Muzaffarnagar (13), Lucknow (11), Bhopal (10), Allahabad (10), and Agra (9) have published ~ 75% of total journals and 25% from rest of 127 total Cities. Also, over 215 journals of Indian origin have been acquired and published by foreign publishers.

To evaluate and measure performance of institutes and universities various tools, techniques and rating agencies from different parts of the world have come up with different data sets and techniques but these are not suitable to the ecology of our institutes and universities. Therefore, for performance evaluation and measurement, we need to have our own system and data sets like 'Indian Citation Index' to produce realistic results.

## Background

Research and innovation are the results of knowledge continuum of human endeavors from the beginning of human civilization. Knowledge assets are visible, countable and tangible indicators of knowledge strength of a country and people's prosperity thereof. The stake holders and actors of knowledge generation assets primarily work in higher education system of the country and broadly comprise universities, R&D institutions, and other academic establishments.

The basic aim of research is to discover and develop methods and systems for advancement of human knowledge. In India higher education system deals with teaching, research, innovation and training which in turn aim to foster academic excellence, develop scientific temperament & ecosystem, industrial innovation and entrepreneurship. Hence, to draw a competitive landscape of Indian research institutes and universities, the required data of 2004 to 2014 has been extracted from 'Indian Citation Index (ICI)'.

India has a large number of academic and research institutes/universities<sup>1</sup>, like – Central Universities – 45\*, Deemed Universities – 129\*, State funded Universities– 297\*, Private Universities – 100\*, Other University level Institutes – 65\*, R&D laboratories and institutes under various government departments and apex bodies like CSIR, ICAR, ICMR, DBT, ISRO, DAE, DRDO, DST, MoES and similar many others which numbers 407\*.

Research scholars, faculty associated with academic and research institutes and universities primarily deal with teaching, research, training in their area of study & expertise. Research output in the form of research articles, review articles, short communications, editorials, special papers, opinion papers, case studies, research reports, etc. are a direct and straightforward measure to understand the research capacity, capability, and strength of an institute/university. However, for this study and analysis, we are taking research papers and all other above mentioned types of research output that appear in journals published from India.

Academics place emphasis on research and publication, not only because it is presumed that research enriches teaching and learning process and contributes to the body of knowledge, but also because it is a major determinant indicator of institutional prestige<sup>2, 3</sup>. Research output is beneficial to every nation because prosperity, wealth generation and economic progress of a nation are directly proportional to the extent of research & technology carried out in that country. Apparent observation based on global data to this effect is that the nation's whose research output is relatively higher, are relatively advanced, prosperous and wealthy in the comity of nations. It may be stated that knowledge has been a significant element in the life of all societies. However, in case of developing countries it might well be that indigenous knowledge rather than that contained in the world's stores of information is likely to be more relevant<sup>4</sup>. Also, capacity to utilize knowledge is fundamental in furtherance of knowledge generation and growth of an organization, individual, region, and country as a whole. Stocking knowledge either by individuals, institutions in whatever form is of no consequence.

Bibliometric analysis is a productivity count, which is descriptive and involves countries, institutions, time periods and disciplines or subjects while literature usage count is evaluative involving reference and citation<sup>5</sup>. Here for this study, we have used bibliometric methods and applications to find out the extent of research output of academic/higher education establishments of India in terms of research articles and counts of similar material contributed by researchers during the period of 2004 to 2014.

A count has been made of the number of the articles published during 2004 – 2014. Another way is citation analysis, which involves counting the number of citations related to institute/university faculty work<sup>6</sup>. To do all this kind of evaluation study, data has been extracted from 'Indian Citation Index (ICI)' database. Similar surveys and studies have already been done<sup>7</sup>with respect to universities, such as the Times Higher Education Supplement, World University Ranking 2006.

They take WoS data as crucial determinants of quality of faculty, universities and countries. But scientists/faculty from developing countries publishes their research papers in national/local journals too, being of applied nature, but this is rarely indexed in WoS. Therefore, evaluation of developing and other countries' research output based on WoS data is inadequate. It needs to be supplemented by the data of respective country's national citation database which adequately indexes journals of all subjects emanating from that country. Applied research of a local nature is rarely cited even when published in the mainstream journals<sup>8</sup>.

## Rankings

Rankings generally spark competition among the stake holders. They may have strengths and weaknesses. Some may argue that competition indirectly improves overall quality in the higher education system. Others may argue that the same competitive forces skew institutional policies in ways that might cause college or university personnel to work against their own missions. Ranking of institutes/universities is a relative position based on defined parameters. In this study we are investigating relative position of institutes/universities based on multivariate approach, like institutes/universities-wise article count, citation count, city-wise articles and citation count, subject-wise quantitative & qualitative strength of institutes/universities, state-wise quantitative and qualitative research productivity, etc. Higher education institutions/universities in India largely vary in their focus, infrastructure, funds, local orientation, faculty, and other required resources.

Ranking approaches world wide follow certain logical set of elements or parameters. All such defined parameters may not fully suit every institute/university of developing world, being heterogeneous ecosystem of their research paradigm. Therefore, they need to come out with their own framework of logical set of parameters to measure and evaluate institutes/universities in order to develop relative ranking approaches. Higher education rankings have been controversial and heavily debated world wide in national and particularly international contexts. In spite of debates and discussions on non-suitability of followed approaches of rankings by different organizations, ranking systems need to adjust to local variations.

## Global Scenario of Ranking System

Ranking is a natural thought process when plenty of things are available to do the same or similar things. In globalised world all have to compete in their area of activities to shine and sustain. Competition provides an opportunity to adjudge level of relative standing among comity of stake holders and thus this relative standing is known as ranking. World-wide there are various ranking systems which come with their own weaknesses of ranking methodologies and which often overshadow their strengths. Prominent among these are four or five university ranking systems that take a global approach. They are: QS "World University Ranking"; Times Higher Education World University Ranking; Academic Ranking of World Universities (ARWU) – often referred to as the "Shanghai Jiao Tong" ranking because it is produced by a unit at Shanghai Jiao Tong University); the CWTS Leiden Ranking and the Webometrics Ranking. There is one that ranks universities around the world in terms of their environmental sustainability: the UI GreenMetric World University Ranking created and compiled by the University of Indonesia.

A major flaw in rankings seems to be in their methodology. For instance, institutions may not actually change in a significant way, but ratings can fluctuate year-to-year as rankers change the weights, assigned value to different indicators. Likewise, many ranking systems produce a single number that summarizes the overall ranking of an academic institution. This practice makes it difficult for students to distinguish among institutions based on the characteristics they find most important, as per their area of consideration. Additionally, much of the objective data used in the rankings is self-reported by the institutions/universities which may be tailored by them. Hence, continuing such a practice without external validation

of data could lead to difficulties for rankings in the future, especially if institutions/universities continue to perceive that rankings influence consumer behavior. It is also true that rankings influence the behavior of consumers (scholars, researchers, students, faculty, decision makers, funding agencies, etc.).

Also, in order to improvise ranking methodologies, participants in the Berlin meeting 2006 discussed available ranking methodologies in various countries and lessons learnt from the experiences of those countries. The meeting included an in-depth discussion of how ranking methodologies might be improved. In addition, participants discussed the fact that many ranking systems classify only a small percentage of institutions and fail to capture the diversity of institutions. Participants emphasized the differences among rankings, as well as the relationship between ranking systems and national goals & ecosystem in the context of an increasingly competitive global economy.

But the fact remains that rankings are useful for the government in reforming higher education system and promoting a culture of quality and transparency. In addition, rankings may be useful to all stake holders in terms of benchmarking and strategic planning, that may be useful for students and faculty when there is a lack of publicly established criteria for quality. Hence, for developing suitable ranking system of a country we require pragmatic and objective approach which can address all kinds of existing geopolitical heterogeneity, particularly socioeconomic and educational R&D ecosystem of individual nation.

Most global rankings use data sets for quantitative & qualitative analytics which are either based on Web of Science (WoS) or SCOPUS or both, which are US and Europe centric and developing/less developed world has no significant representation in them in terms of coverage of research papers. Due to this, many countries have developed their own data sets to formulate and develop their own meaningful rankings.

Rankings have to differ from country to country due to regional disparity, different needs and contextual ecosystem and non-availability of unbiased acceptable uniform data sets. All universities, particularly private ones, are under pressure to show higher rank to lure students and sustain in this competitive world.

## Higher Education in India

The Indian higher education system is in the process of an unprecedented transformation. This transformation is being driven by economic and demographic change: by 2020, India will be the world's third largest economy, with a correspondingly rapid growth in the size of its middle class. At present, over 50% of India's population is less than 25 years old; by 2020 India will outpace China as the country with the largest tertiary-age population. Despite significant progress over the past ten years, Indian higher education is faced with five broad challenges:

1. **Supply-demand gap:** India has a low rate of enrolment in higher education, at only 20%, compared with 26% in China and 36% in Brazil. There is enormous unmet demand for higher education. By 2020, the Indian government aims to achieve 30% gross enrolment, which will mean providing 40 million university seats, an increase of 14 million in six years.
2. **Low quality of teaching and learning:** There has been little focus on quality. The real purpose of education should have been to inspire or ignite inner zeal of students, scholars for learning, research and innovation to generate intellectual assets in country. But that has been missing due to various factors.
3. **Constraints on research capacity and innovation:** With a very low level of PhD enrolment, India does not have enough high quality researchers. There are few opportunities for inter-disciplinary and multidisciplinary work, lack of early stage research experience; a weak ecosystem for innovation, and low levels of industry engagement, though that bit is changing now. There is very little demand-driven research which can solve glaring societal needs and problems. The Prime Minister's new Imprint scheme of providing research funding to academic institutions is likely to change that.

4. **Uneven growth and access to opportunity:** In India there is high disparity and divide at social level; access to higher education is uneven coupled with multidimensional inequalities in enrolment across population groups and geographies. All this is well reflected in three central pillars of the government's plans for education, i.e. expansion, equity and excellence. Accordingly, under RUSA program over the next five years, every aspect of higher education is being reorganized and remodeled: funding, leadership and management, quality assurance, accountability, relationships with industry, international collaboration and the way teaching and research are conducted. Emphasis will be placed on strengthening existing institutions. Probably, this is the biggest and most ambitious reform program in the governance and funding of state universities after country's independence. However, its intended execution and yield is yet to be seen.

## About 'Indian Citation Index (ICI)'

*"If you can measure that of which you speak, and can express it by a number, you know something of your subject; but if you cannot measure it, your knowledge is meager and unsatisfactory"*

—William Thomson, Lord Kelvin

Indian Citation Index (ICI) is a home grown abstracts and citation database, with multidisciplinary subjects' coverage. It provides powerful search engine to perform search and evaluation for researchers, policy makers, decision makers, etc. At present, ICI database has data depth of 10 years, i.e. 2004 onwards and it is updated every month. It uses intellectual links by listing both cited and citing works. Like other citation indexes, this enables one to move back in time to previously published papers. But one can also look forward in time to determine who has subsequently cited an earlier piece of research. The objectives of ICI are: to ensure access to articles published in local Indian R&D literature at national and global level; to reflect and represent true picture of locally published Indian scholarly contribution at national and global level; to have an authentic tool/ground for effective and rigorous evaluation of Indian scholarly works in true sense and spirit.

## Scope

This study aims to measure and evaluate 'Research Competitiveness of Universities and other R&D Institutes' of India based on Indian Citation Index database. Its reference time period is 2004 to 2014.

## Objectives

1. **Analyze journals published from India covering following aspects:**
  1. In what way the journals published from India and foreign countries are different – in presentation of style, lucidity of language, graphic description?
  2. What is the quantum of foreign collaborative research articles in journals published from India?
  3. Which are the countries of collaborative publications?
  4. Where do Indian journals stand vis-à-vis to foreign (International journals)?
2. **Analyze citation trends of journals published from India**
  1. What are the unique points of citations in Indian journals/publications?
  2. Are Indian journals as vigorous as international ones?
3. **Relative standing or position of Indian Institutes/universities**
  1. Trend Analysis of IITs
  2. Trend Analysis of NITs

3. Trend Analysis of Central Universities
4. Trend Analysis of State Universities
5. Trend Analysis of Deemed Universities
6. Trend Analysis of Private Universities
4. **Research Journals published from India.**
  1. Subject wise list of journals published from India
  2. State wise list of journals published from India
  3. City wise list of journals published from India
  4. List of journals being published in collaboration of foreign publishers

## Methodology

In this study a simple methodology has been followed. The required data is extracted from ‘Indian Citation Index (ICI)’ database for a time span of 2004 to 2014 and organized into various tables to address the defined objectives. The extracted data is analyzed from different dimensions to adjudge relative performance and position of institutions/universities. The description with respective data is organized into four sections and their subsections- Section 1.0 Journals Published from India; 2.0 Analyze Citation Trends of Journals Published from India; 3.0 Relative Standing or Position of Indian Institutes/Universities; and 4.0 Research Journals Published from India

## Section 1.0: Journals Published from India

A journal refers to a serial and serious, scholarly publication that is well peer-reviewed, issued at defined and undefined interval. In the world history of journals, the first one was published in 1665, on 5<sup>th</sup> January i.e. ‘*Journal des sçavans*’ and thereafter in the same year on 6<sup>th</sup> March 1665 second journal, i.e. ‘*Philosophical Transactions*’, was published which pioneered the concepts of scientific priority and peer review system. In India, first journal ‘*Asiatick Researches*’ was published in 1788. Since then journal publication in India has come a long way and as of now over 6,000 journals in various forms and styles are being published from here. The figure of 6,000+ is quite impressive but all these are not research journals. In the category of journals many different type of publications such as newspapers, newsletters, house journals, business news, magazines, popular periodicals, etc. are also counted. However, out of 6,000+ journals, only about 1,800 are good, research-oriented and peer-reviewed publications but out of these, 500 -600 are either irregular or run late. Thus, there are only 1,200 – 1,300 journals which are considered as indexable. In Indian Citation Index (ICI), currently, 900 + journals of these, covering all subjects are indexed, with data depth of 2004 onwards.

### 1. (i) Difference in journals published from India and foreign countries: in presentation, lucidity of language and graphic description

Prior to mapping the difference between foreign and Indian journals based on certain given parameters, we need to understand the meaning/definition/scope of ‘national’ or ‘local’ and ‘international’ journals. So far it is an ambiguous and grey area. We all very frequently use the term “International Journal” and “National/Local Journal” without knowing and understanding technical and anatomical difference between the two.

## International Journal

Primarily, for any publication to qualify as a journal, it must meet the following criteria. This is irrespective of “international” word in its title and the location of the publication.

- The editorial board members/editors/reviewers need to be well known experts in the subject area of the journal.
- The editorial board members/editors/reviewers need to be “Inter-institutional”, and preferably “Inter-Countries”.
- The journal as a policy and scope should receive and publish papers from own and foreign country author(s).
- The journal should have its wide circulation/subscriptions from own and foreign countries.
- The journal should carry ISSN, which is a unique and international number.
- The journal needs to follow rigorous peer review mechanism comparable to world standards and practices.
- The journal should come regularly as per its defined frequency.

## National Journal

Journals which have national orientation framework and are largely confined to national boundary are known as national/ local journals. Following points further clarify the features of a journal to be called national/local.

- The editorial board members/ editors/reviewers are well known experts in the subject area of the journal.
- The editorial board members/editors/reviewers should be “Inter-institutional” from the country of journal’s origin.
- The journal as a policy and scope should receive and publish papers from own country author(s).
- The journal should have its circulation/subscriptions from own countries.
- The journal should carry ISSN, which is a unique and international number.
- The journal should be peer reviewed.
- The journal should come regularly as per its defined frequency.

## Quality of a publication/article

The term quality is generally subjective and contextual; however, in case of research publication, its readers are the best judge. Though the quality of research and innovation is enlightening; it changes the direction of a field dramatically; and advances the field not incrementally, but in a major visible or perceivable manner. A research publication should possess the following three dimensions for attracting quality and citations:

1. Physical: Its attributes-- physical format, binding, designing, paper quality, shape, form, etc.
2. Subtle: Attributes are microscopic personality of a document, like printing, language, fonts, format, margins, ink quality, etc.
3. Soul: Attribute is research finding, innovation, invention, etc. achieved through in vivo and in vitro processes.

In order to assess the qualitative difference in so called International (foreign) and Indian journals, we examine and evaluate both on certain parameters as in below given Table:

**Table 1(i) Difference in journals published from India and foreign countries**

S. N.	Feature	International journal	Indian/local journal
1	Presentation: physical format, binding, designing, paper quality, shape, form, etc.	Very good	Good
2	Subtle: reflects microscopic personality of a document, like printing, language, fonts, format, margins, ink quality, etc.	Very good	Good
3	Soul: original research finding, innovation, invention, etc. achieved through in vivo and in vitro processes	Very good	Not that strong
4	Degree of acceptance in international market. Scope of coverage and circulation from countries outside the journal's country of origin	Strong and international in nature	Acceptance is there but is relatively weak
5	Regularity of issuance or timeliness	Very good	Good but quite few run late
6	Continued presence in the market	Very good	Good
7	Governing bodies	International in nature with inter-country representation	International but largely local
8	Professionalism, attitude & devotion of editors /reviewers	Strong	Good but at times casual
9	Review mechanism	Strong	Good but at times casual
10	References	Okay, but few references are incomplete	Okay, but substantial number either incomplete or incorrect
11	Author guidelines	Available	Available
12	Editorial Information	Available	Available
13	ISSN	Available	Available
14	Visibility	High & global	Local
15	Marketing and sales network	International	Local

### 1.1 Quantum of foreign collaborative research articles in journals published from India

There is substantial collaboration from 174 countries of the world as reflects from below given Table's data. Here, the sum of articles count exceeds to total source articles available in ICI database. This is because there are multiple authors of an article who may belong to different countries but as a count that single article will be counted for each author and country too.

**Table 1.1. (i) Quantum of foreign collaboration**

## 1.0. Comparison of foreign (International) & Indian journals

From the below given Table of frequency based comparison, there is visible difference in issuance periodicity of journals published from foreign countries and India. Foreign journals with Half Yearly, Quarterly, Bimonthly, Monthly, Fortnightly, Weekly, and others as at serial number 9 to 13 are visibly on higher side than India. Journals of Indian origin are relatively more with Half Yearly & Quarterly frequencies and there is no research journal available with Weekly, (52 Issue/Annum), 5 Issue/Annum, 8 Issue/Annum, 10 Issue/Annum, 14 Issue/Annum, and Irregular (No defined Frequency) in Indian Citation Index (ICI).

**Table 1.2. Indian Journals vis-à-vis Foreign (International Journals)**

S.No	Frequency	Foreign Journals %	Journals published from India %
1	Annual, (1 Issue/Annum)	3.876	3.134
2	Half yearly, (2 Issue/Annum)	9.044	31.642
3	Triannual, (3 Issue/Annum)	5.943	7.164
4	Quarterly, (4 Issue/Annum)	31.008	37.910
5	Bimonthly, (6 Issue/Annum)	23.773	11.194
6	Monthly, (12 Issue/Annum)	13.695	8.507
7	Fortnightly, (26 Issue/Annum)	2.326	0.299
8	Weekly, (52 Issue/Annum)	0.258	0.000
9	5 Issue/Annum	1.809	0.000
10	8 Issue/Annum	2.067	0.000
11	9 Issue/Annum	0.258	0.149
12	10 Issue/Annum	0.775	0.000
13	14 Issue/Annum	0.517	0.000
14	Irregular (No defined Frequency)	4.651	0.000

*Note: The Table is based on random data of foreign (387) and Indian Journals (670) analyzed*

Low frequency/periodicity is also one of the factors of low/delayed visibility of a journal which result to low citations of journals of Indian origin. India's data share of research papers published in journals of Indian and foreign origin is 52.353% and 47.646% respectively, therefore, no assessment and evaluation of our research productivity pertaining either to individuals, institutes, states, cities, etc. would be realistic and complete without taking in account the 52.353% research papers of India's total productivity

## Section 2.0 Analyze Citation Trend of Journals Published from India

### 2.1 What are the Unique Points of Citations in Indian Journals?

### 2.2 Are Indian Journals as Vigorous as International ones?

*For 2.0, 2.1 and 2.2 refer 1.0, 1.1, and 1.2 as above*

## Section 3.0 Relative Standing or Position of Indian Institutes and Universities

### 3.1. Indian Institutes of Technology (IITs): Analysis of Research Productivity and Quality

The Indian Institutes of Technology (IITs) are autonomous public funded institutes of higher education, learning and research in India, located across the country. They are founded and governed by the ‘Institutes of Technology Act, 1961’ which has declared them as “institutions of national importance”, [1]. The history of the IIT system dates back to 1946 when Sir Jogendra Singh of the Viceroy’s Executive Council set up a committee whose task was to consider the creation of Higher Technical Institutions for post-war industrial development in India. The 22-member committee, headed by Nalini Ranjan Sarkar, recommended the establishment of these institutions in various parts of India.

As a result of such recommendation, the first ‘Indian Institute of Technology (IIT)’ was founded in May 1950 at Kharagpur. Subsequent to this, on 15 September 1956, the Parliament of India passed the Indian Institute of Technology (Kharagpur) Act, declaring it as an Institute of National Importance. Pandit Jawaharlal Nehru, first Prime Minister of India, in the first convocation address of IIT Kharagpur in 1956 said [18]

*“Here in the place of that Hijli Detention Camp, Khargpur stands the fine monument of India, representing India’s urges, India’s future in the making. This picture seems to me symbolical of the changes that are coming to India”.*

Latter to ‘Indian Institute of Technology (Kharagpur) 1956 Act and in order to establish more number of similar institutes in the country, “Institutes of Technology Act, 1961” was passed by the Parliament of India. So, as of now there are eighteen IIT institutes located at Chennai, Delhi, Guwahati, Kanpur, Kharagpur, Mumbai, Roorkee, Bhubaneswar, Gandhinagar, Hyderabad, Indore, Jodhpur, Mandi, Patna, Ropar and Varanasi.[4] Each IIT is an autonomous institution, linked to the others through a common IIT Council, which oversees their administration. A list of all eighteen IITs is as given below:

From the above Table it is clear that up to 2001, there were only seven IITs, viz: IITKGP, IITB, IITK, IITM, IITD, IITG, and IITR, and rest are relatively new and established mainly 2008 onwards only. In 2008 Government of India took long jump to established six more IITs, viz: IITBBS, IITGN, IITH, IITJ, IITP, and IITRPR, two more IITs were established in 2009, viz: IITI and IIT Mandi, thereafter, one in 2012, i.e. IITBHU and two in 2015, i.e. IITPKD and IITTP have been established. It is worth mentioning that higher learning institutes/university, etc. need 12 to 15 years time span in getting maturity and deliver desired goals of research and innovation. Keeping this factor in mind, and have a level playing field for comparison and evaluation, IITs are divided into two groups, i.e. Category ‘A’ IITs established up to 2000 and Category ‘B’ IITs established after 2001 onwards. In below Table, two more institutes have also been taken for evaluation and comparison purpose as they have been treated at par IITs. These two institutes are – IITBHU (though it exists from 1919 but declared as IIT in 2012) and Indian School of Mines (ISM).

Source: ICI, 2004 – 2014

The IITs established by the year 2000 have contributed 9202 research articles and received 4190 citations in journals published from India in a time span of 2004 – 2014. In order of productivity ranking, IIT Kharagpur stands at first position with 1794 research articles contribution, followed by second position IIT Delhi with 1496 research articles, third position is occupied by IIT Roorkee with 1427 research articles. Similarly while measuring the quality i.e. number of citations received to IITs against their number of research papers contribution, IIT Delhi stands at first position among all by having 912 citations against their 1496 research papers, though it stands at number two position in terms of articles count, i.e. quantity of research papers. It is followed by IIT Kharagpur (second position) with 989 citations against their 1794 research papers which stand at number one position in terms of articles count. IIT Roorkee is at third position with 616 citations against their 1427 research papers.

The Table3 (ii) also reveals that ‘Engineering Science and Technology’ and ‘Chemistry’ are the two subjects wherein all the IITs have made good, consistent, and visible contribution relative to other subject categories. However, in the subject category of ‘Engineering Science and Technology, IIT Roorkee stands at first position with 470 research papers, followed by IIT Madras with 425 research papers, and IIT Kharagpur with 404 research papers and occupy second and third positions respectively. It shows that IITs main core subject areas are ‘Engineering Science and Technology’ and ‘Chemistry’, though IITs are making good contributions in other subjects too.

On analyzing IIT wise subjects focus of their research contribution, it is found that IIT Bombay have contributed more than 100 research papers in three subject categories, viz: ‘Chemistry’ (121), ‘Earth and Geological Science’ (126), and ‘Engineering Science and Technology’ (244). IIT Delhi have contributed more than 100 research papers in five subject categories, viz: ‘Chemistry’ (122), ‘Engineering Science and Technology’ (346), ‘General Science and Technology’ (184), ‘Management’ (130), and ‘Textile’ (153). IIT Guwahati have only one subject category wherein that contributed more than 100 research papers, viz. ‘Engineering Science and Technology (114)’. IIT Kanpur have contributed more than 100 research papers in two subject categories, i.e. ‘Engineering Science and Technology’ (148), and ‘General Science and Technology’ (120). IIT Kharagpur have contributed more than 100 research papers in five subject categories, i.e. ‘Chemistry’ (115), ‘Earth and Geological Science’ (160), ‘Engineering Science and Technology’ (404), ‘General Science and Technology’ (107) and ‘Material Science’ (136). IIT Madras have contributed more than 100 research papers in two subject categories, i.e. ‘Chemistry’ (106), and ‘Engineering Science and Technology’ (425). IIT Roorkee have contributed more than 100 research papers in three subject categories, viz. ‘Earth and Geological Science’ (161), ‘Engineering Science and Technology’ (470), and ‘General Science and Technology’ (126). IIT Varanasi is contributing more than 100 research papers only in ‘Engineering Science and Technology’ (124), and ISM Dhanbad have contributed more than 100 research papers in two subject categories, i.e. ‘Earth and Geological Science’ (125), and ‘Engineering Science and Technology’ (127).

The category 'B' IITs (Indian Institutes of Technology, Established from 2001 - 2014) research contribution looks very insignificant as none of the IIT could contribute even 50 research articles. This seems logical too because generally the gestation period of academic institutes/universities/research institutes, etc. is over ten years. After 10 – 12 years, academic institutes/universities/research institutes, etc. may start delivering the desired results. This trend also indicates that the beginning 12 – 15 years time span is the formative period which essentially required attaining maturity and emanating visible research output.

## 1.2 National Institutes of Technology (NITs): An Analysis of Research Productivity and Quality.

The National Institutes of Technology (NITs) is a group of public engineering colleges of India. These institutes have been declared by Act of Parliament as institutions of national importance<sup>9</sup>. All these NITs from their inception used to be referred to as 'Regional Engineering Colleges (RECs)' and were governed by their respective state governments. NITs were founded to promote regional diversity and multi-cultural understanding in India. NITs are thirty autonomous institutes, they are generally located in one each major state/territory of India. In 2007, the Indian government declared these institutions as 'Institute of National Importance'. Among NITs family, NIT Patna has the oldest history 1886+, followed by NIT Raipur 1956, NIT Warangal 1959 and so on. In 1960 to 1970, thirteen NITs were established, 1971 to 1980 not a single NIT was established, 1981 to 1990 only two NITs were established and starting from 1991 to 2009, not a single NIT was established. In the history of NITs establishment in the country, year 2010 seems to be very rich year wherein ten (10) NITs were established and thereafter in 2015 one more NIT is established. Hence the history of establishing NITs in the country is much skewed.

NITs are important institutions among engineering group in the country. Primarily, they are fully engaged in imparting education in engineering and not research till 2007. After getting the tag of 'institutes of national importance, their mandate has been redrawn to achieve following goals: offer effective teaching-learning to students; provide the knowledge, skills and attitudes to UG and PG students for their being able to be distinguished globally and be socially responsible; train the students to learn to meet changing needs due to rapid technological advancement, to offer the society the necessary technology and to actively participate in all round socio-economic development programmes; provide facilities, infrastructure, inspiration and resources to conduct the meaningful research along with development of understanding of social relevance including that of indigenous materials, capacities and technologies; act as centers of excellence in technical education catalyzing absorption, innovation, diffusion and transfer of high technologies for improved productivity & quality of life at national and global level; have regional consideration as regards to local needs, relevance, strength and limitations and the community services; create an environment for effective teaching-learning by encouraging the students and faculty to nurture their intellectual curiosity, and scientific and research temper; increase research and consultancy activity, with options for incentives and encouragement to motivate staff and students to actively involve in research activities in collaboration with industry and R&D centers.

*Soucre: Wikipedia*

*‡Converted to NIT*

In order to understand and analyze the research productivity of NITs, we have followed a uniform approach. Accordingly, here we have divided all NITs into two groups, i.e. category ‘A’ the NITs established up to the year of 2000, and category ‘B’ the NITs established after 2001 onwards.

**Table 3.2 (iii) NITs produced more than 100 Articles in 2004 - 2014**

S.No.	Subject	MANIT	NIT Karnataka	NIT K	NIT R	NIT T	NIT W	SVNIT	VNIT	Total Articles
1	Engineering Science and Technology	137	131	136	125	169	111	121	127	1057

*Source: ICI, 2004 – 2014*

On subject wise analysis, it is found that NITs core subject is ‘Engineering Science and Technology’ with 1580 research papers, followed by Chemistry with 532 research papers, Material Science with 355 research papers. After the core subjects, NITs in three subject, i.e. Physics with 214 research papers, Environmental Science with 245 research papers, Earth and Geological Science with 216 research papers and Computer Science and Technology with 225 research papers are the moderate in their research productivity. Thereafter, General Science & Technology (162), Mathematics (119), Biological Science (107), Management (91), Library and Information Science (86), Education (85), Pharmacology and Pharmaceutical Science (75), Pollution (74), Energy and Fuel Science (62), Water (49), Health Science (41), Agriculture (36), Social Science (35), Textile (33), Arts and Humanities (25), Biotechnology (24), Oceanography and Marine Science (23), Business and Marketing (19), Economics (15), Others (13), Telecommunication (12), Remote Sensing (9), Botany (9), Food and Beverage Science (7), History and Philosophy of Science and Knowledge (4), Statistics (2), Forestry (2), Astronomy, Astrophysics, Space and Geodesy (7), Fishery (2), Anthropology (1), Domestic Science (1), Meteorology (1), Nanoscience and Nanotechnology (1), Psychology (1), Toxicology (1) are the peripheral subjects in NITs research productivity. The figures shown in bracket corresponding to subject category are the number of research papers contributed in that subject over the period of 10 years.

Source: ICI, 2004 – 2014

Subject wise analysis of NITs (Category ‘B’) established after 2001 onwards shows that core subject of their concern is ‘Engineering Science and Technology’ with 5 research papers, followed by Chemistry with 3 research papers. In second rank subjects are ‘Physics’ with 1 research papers and Computer Science and Technology with 3 research papers. Thereafter, in peripheral subjects are

**Table 3.2 (v) NITs with no research papers produced**

S.No	NITs	Established Year
1	National Institute of Technology Delhi (NIT Delhi)	2010
2	National Institute of Technology Goa (NIT Goa)	2010
3	National Institute of Technology Meghalaya (NIT Meghalaya)	2010
4	National Institute of Technology Mizoram (NIT Mizoram)	2010
5	National Institute of Technology Nagaland (NIT Nagaland)	2010

*Source: ICI, 2004 – 2014*

The above listed five NITs are relatively new and are of about five years of age, established in the year of 2010. Generally institutes/universities take about 12 – 15 years time in attaining maturity and making contributing in research and innovation.

### 3.3 Trend Analysis of Central Universities

Trend analysis is a method to evaluate the performance based on data of similar establishments of a defined period and is one of the tools used in the disclosure of strengths and weaknesses of the targeted objects. Here we are comparing performance of central universities of the country based on their research papers of journals published from India. Based on research papers and citations received counts, a relative position of central universities have been determined and shown in Table below. The analysis reveals the relative position of a university among the comity of central universities. Based on this stakeholders can take a note to induct corrective and competitive measures.

For this study purpose all central universities are divided into two categories, i.e. Category ‘A’ and Category ‘B’. Category ‘A’ are those established prior/up to the year 2000 and Category ‘B’ established from 2001 onwards. A university needs about 12 – 15 years time for attaining maturity and comparable standard.

### 3.4 Trend Analysis of State Universities

Trend analysis is a method to evaluate the performance based on data of similar establishments of a defined period and is one of the tools used in the disclosure of strengths and weaknesses of the targeted objects. Here we are comparing performance of state universities of the country based on their research papers in journals published from India. Based on research papers and citations received counts, a relative position of state universities have been determined and shown in Table below. The analysis reveals the relative position of a university among the comity of state universities. Based on this, all stakeholders can take a note to induct corrective and competitive measures.

For this study purpose all state universities are divided into two categories, i.e. Category 'A' and Category 'B'. Category 'A' are those established prior/up to the year 2000 and Category 'B' established from 2001 onwards. A university needs about 12 – 15 years time for attaining maturity and comparable standard.

Table 3.4.(ii) Ranking of Category 'A' State Universities based on research productivity

### **3.5 Trend Analysis of Deemed Universities**

Trend analysis is a method to evaluate the performance based on data of similar establishments of a defined period and is one of the tools used in the disclosure of strengths and weaknesses of the targeted objects. Here we are comparing performance of deemed universities of the country based on their research papers in journals published from India. Based on research papers and citations received counts, a relative position of deemed universities have been determined and shown in Table below. The analysis reveals the relative position of a university among the comity of deemed universities. Based on this, all stakeholders can take a note to induct corrective and competitive measures.

For this study purpose all deemed universities are divided into two categories, i.e. Category 'A' and Category 'B'. Category 'A' are those established prior/up to the year 2000 and Category 'B' established from 2001 onwards. A university needs about 12 – 15 years time for attaining maturity and comparable standard.

**Table 3.5 (ii) Ranking of Category 'A' Deemed Universities based on research productivity**

### 3.6 Trend Analysis of Private Universities

Trend analysis is a method to evaluate the performance based on data of similar establishments of a defined period and is one of the tools used in the disclosure of strengths and weaknesses of the targeted objects. Here we are comparing performance of state universities of the country based on their research papers in journals published from India. Based on research papers and citations received counts, a relative position of state universities have been determined and shown in Table below. The analysis reveals the relative position of a university among the comity of state universities. Based on this, all stakeholders can take a note to induct corrective and competitive measures.

For this study purpose all private universities are divided into two categories, i.e. Category 'A' and Category 'B'. Category 'A' are those established prior/up to the year 2000 and Category 'B' established from 2001 onwards. A university needs about 12 – 15 years time for attaining maturity and comparable standard.

## 4.0 Research Journals Published from India

In India first journal 'Asiatick Researches' published in 1788. Since then journals publication in India has come to a long way and as of now over 6000 journals in various forms and styles are being published from India. The figure of 6000+ is quite impressive but all these are not research journals. In category of journals many different type of publications like news papers, newsletters, house journals, business news, magazines, popular periodicals, etc. also accounted for. However, out of 6000+ journals category publications about 1800 journals is good research oriented and peer reviewed publications but 500 – 600 journals either irregular or running late. Thus, there are only 1200 – 1300 journals remains to be considered as indexable in Indian Citation Index (ICI). Currently, 900 + journals of all subjects are indexed with data depth of 2004 onwards.

### 4.1. Subject wise research journals/publications published from India

**1 Agriculture:** India is known as Agriculture dominating country; therefore, in Agriculture domain India has over 100 years history of research journals. In Agriculture subject, the number of journals published from India and indexed in Indian Citation Index (ICI) is 109. The oldest journals in Agriculture science from India is 'Madras Agricultural Journal (The)' published in 1911, followed by 'Indian Journal of Agricultural Sciences (The)' 1931, 'Indian Journal of Entomology' 1939, 'Indian Journal of Horticulture' 1942', Indian Journal of Agricultural Economics' and Indian Journal of Soil and Water Conservation' both in 1946. Thus, till independence of the country there were 06 research journals in Agriculture subject. After independence things did start differently and number of journals in all associated fields of Agriculture grew in gradual order over the period of time.

- 2 Anthropology:** is the study of humans, past and present. To understand the full sweep and complexity of cultures across all of human history, anthropology draws and builds upon knowledge from the social and biological sciences as well as the humanities and physical sciences. There are seven journals published from India and continued during 1900 – 2014. The first journal in Anthropology published in 1947, i.e. ‘Eastern Anthropologist (The)’, followed by ‘Journal of the Indian Anthropological Society’, 1966, ‘Indian Anthropologist’ 1971, ‘Indian Journal of Physical Anthropology and Human Genetics’ 1975, ‘Anthropologist (The)’ 1999, ‘Oriental Anthropologist (The)’ and ‘South Indian Anthropologist’ both came in 2001.

- 3 Apiculture:** is known as ‘Beekeeping’ in general terms. It is the maintenance of honey bee colonies, commonly in hives, by humans. A beekeeper keeps bees in order to collect their honey and other products that the hive produces like beeswax, propolis, pollen, and royal jelly. Also, bees play very significant role in pollination of crops, or to produce bees for sale to other beekeepers. A location where bees are kept is called an apiary or “bee yard”. In ‘Apiculture’ subject there are only two journals,

i.e. 'Indian Bee Journal' published from 1939, and other one 'Journal of Dairying Food and Home Science' published from 1982.

**Table 4.1 (3) List of 'Apiculture' Journals**

2	APICULTURE	JOURNAL OF DAIRYING FOOD AND HOME SCIENCE	1982	0971-4456

*Source: ICI, 2004 – 2014*

**4 Arts and Humanities:** deals in art and design, dance, drama, fine art, history of art, music, media studies, religious studies, language and literature, etc. Though, this subject area represents many aspects of knowledge spectrum but there are only seven core journals which indicate no much growth and research in India in this area of study.

**5 Astronomy, Astrophysics, Space and Geodesy:** astronomy refers to the study of objects and matter outside the earth's atmosphere and of their physical and chemical properties and astrophysics refers to the branch of astronomy dealing with the behavior, physical properties, and dynamic processes of celestial objects and phenomena. Geodesy deals with the shape and area of the earth or large portions of it. These branches are the oldest science subject areas and in India too 'Aryabhata' is known as one of the famous and classical sage who born in 476 AD and worked for mathematics and astronomy. However, number of journals in this discipline are not much, there are only five core journals, wherein first is 'Indian Journal of Aerospace Medicine' came in 1954, followed by 'Indian Journal of Radio and Space Physics' 1972, 'Bulletin of the Astronomical Society of India' 1973, 'Journal of Astrophysics and Astronomy', and 'Journal of Aerospace Sciences and Technologies' 2004.

**6 Biological Science:** is an exciting and rapidly developing subject area. Biological science is a natural *science* concerned with the study of life and living organisms, including their structure, function, growth, evolution, distribution, and taxonomy. The advancement in life science has undergone tremendous expansion in recent year’s world widely. India too has good work in this area of discipline and as result of this 105 research journals are being published from India. In Biological Science, the oldest journal in India is ‘Journal of Genetics’ published from 1910, followed by ‘Proceedings of the National Academy of Sciences, India, Section B, Biological Sciences’ 1930, ‘Indian Journal Entomology’, 1939, and ‘Indian Journal of Genetics and Plant Breeding (The)’ 1941. These four journals published prior to the country’s independence, and thereafter a good growth of journals in ‘Biological Science’ is well visible from Table.

**7 Biotechnology:** is the use of living systems and organisms to develop or make products, or any technological application that uses biological systems, living organisms or derivatives thereof, to make or modify products or processes for specific use. 'Biotechnology' as a subject is relatively new and fast emerging area of applied research and development. In Indian Citation Index (ICI) database 15 research journals published from India are being indexed so far. Being new, the first journal which started publishing 'Biotechnology' oriented papers is the 'Journal of the Oil Technologist Association of India' 1969, thereafter, many new journals in core area of 'Biotechnology' did start, like 'Journal of Plant Biochemistry and Biotechnology' 1992, 'Asian Biotechnology and Development Review' 1997, and so on. A good growth of journals in 'Biotechnology' is well visible below from Table.

**8 Botany:** is the scientific study of plants. “Plants,” to most people, means a wide range of living organisms from the smallest bacteria to the largest living things - the giant sequoia trees. It studies algae, fungi, lichens, mosses, ferns, conifers and flowering plants. It is one of the branches of ‘Biology’ and falls in category of natural science. A good growth of journals in ‘Botany’ is well visible below (41 in number) from Table 1 (iv-i) which shows ‘Indian Journal of Genetics and Plant Breeding’ 1941 is one of the starters of journals in ‘Botany’ as a discipline.

**9 Business and Marketing:** is a marketing practice of individuals or organizations (including commercial businesses, governments and institutions). It allows them to sell products or services to other companies or organizations that resell them, use them in their products or services or use them to support their works. In this subject category, 19 research journals are available in 'Indian Citation Index (ICI) and growth of journals over the time is as shown below in Table.

**10 Chemistry:** is a branch of physical science that studies the composition, structure, properties and change of matter. Chemistry is a subject wherein large amount of research articles are emanating world widely and accordingly journals. Here in 'Indian Citation Index (ICI) 54 research journals published from India are being currently indexed. Three journals published prior to independence of the country, such as 'Journal of Indian Chemical Society' 1924, 'Journal of the Institution of Chemists (India)' 1929, and 'Journal of Chemical Science', 1934. Thereafter, a good growth in number of journals is well visible from below Table.

**11 Computer Science and Technology:** is the scientific and practical approach to computation and its applications. It is the systematic study of the feasibility, structure, expression, and mechanization of the methodical procedures (or algorithms) that underlie the acquisition, representation, processing, storage, communication of, and access to information. Computer Science and Technology rapidly growing subject area and in this discipline India's contribution is quite significant. As a result 27 journals in this discipline are indexed in 'Indian Citation Index'. In India this subject area began to develop in 1970's, and its first core journal 'Journal of Information and Optimization Sciences' 1980 published followed by 'Journal of the Institution of Engineers (India) Part CP: Computer Engineering Division Board, 1985, 'International Journal of Information and Computing Science, 1998 and rest published 2000 onwards as details are shown below in Table.

**12 Dairying, Dairy, Animals and Animals Produce:** milk producing and other useful animals for human societies have been domesticated for thousands of years. Initially, they were part of the subsistence farming that nomads engaged in. As the community moved about the country, their animals accompanied them. Animals are a big part of the symbiotic relationship between the animals and the herders. People in agricultural societies owned dairy animals that they milked for domestic and local consumption. Factually, Dairying, Dairy, Animals and Animals produces activities are one of the typical examples of a cottage industry in India. Indian Citation Index (ICI) is indexing 10 research journals published from India. In this subject category first core journal is 'Indian Journal of Animal Sciences (The), 1931, followed by 'Indian Journal of Dairy Science' 1948, and rest of the journals came in existence in staggered order over the period of time as shown below in Table

**Table 4.1 (12) List of Journals of ‘Dairying, Dairy, Animals and Animals Produce’**

**14 Earth and Geological Science:** it is changing rapidly in scope and nature. Basically, this subject category deals with rock materials and geological phenomena as well as applying theory and techniques from physics, chemistry, materials science and biology to the study of the earth and the environment. Also, earth sciences as a discipline may include the study of the atmosphere, hydrosphere, lithosphere, and biosphere. Indian Citation Index (ICI) currently indexing 29 core research journals wherein oldest journal is ‘Journal of Earth System Science’ 1934, followed by ‘Geographical Review of India’ 1939, and rest as shown below in Table.

**15 Economics:** it describes the factors which determine the production, distribution and consumption of goods and services. Economics focuses on the behavior and interactions of economic agents and how economies work. Currently, Indian Citation Index (ICI) is indexing 20 journals of this subject category and out of them two journals is publishing prior to independence of the country. These two journals are ‘Indian Journal of Economics (The)’ 1916, and ‘Indian Journal of Agricultural Economics’ 1946. Rest of the journals is published shown below in given Table.

**16 Education:** is the process of facilitating learning, knowledge, skills, values, beliefs, and habits of a group of people are transferred to other people, through storytelling, discussion, teaching, training, or research. Education is commonly and formally divided into stages such as preschool, primary school, secondary school and then college, university, apprenticeship, etc. The methodology of teaching is called pedagogy. Education is the prime factor for over all development, learning and liberation of humans. Indian Citation Index (ICI) is indexing 24 core research journals of education published from India and details of them are as shown below in Table.

**17 Energy and Fuel Science:** are the applications of science and scientific methods for effective conversion and utilization of energy resources and carbon materials into fuel and energy sources. Fossil fuel - coal, natural gas, and oil, etc. are the major resources to meet our energy needs, but their production and use have significant health and environmental impacts, including air and water pollution, environmental degradation, and global warming. In this subject area 05 research journals published from India are indexed in ‘Indian Citation Index (ICI)’. The details of these journals are as shown in Table.

**18 Engineering Science and Technology:** deals with technological fields that requires the application of scientific and engineering knowledge and methods combined with technical skills in support of engineering activities. In this subject category, currently ‘Indian Citation Index (ICI) is indexing 77 research journals and out of these 77 journal 04 journals are in continuation from 1919 +. Namely, ‘Journal of the Institution of Engineers (India) Mechanical Engineering Division Board, 1919, ‘Journal of the Institution of Engineers (India) Civil Engineering Division Board, 1920, ‘Journal of the Institution of Engineers (India) Electrical Engineering Division Board, 1920, ‘Journal of the Institution of Engineers (India) Metallurgical and Materials Engineering Division Board, 1920, and rest of the journals emerged over the period of time as details of them are below in Table.

**19 Environmental Science:** is an interdisciplinary field that integrates physical, biological and information sciences. It interacts with the diverse applications of natural sciences like ecology, biology, physics, chemistry, zoology, mineralogy, oceanology, limnology, soil science, geology, atmospheric science, and geodesy to the study of the environment, and the solution of environmental problems. The field

of environmental science can be divided into three main goals, which are to learn how the natural world works, to understand how we as humans interact with the environment, and also to determine how we affect the environment. The third goal of determining how humans affect the environment also includes finding ways to deal with these effects on the environment. Currently 'Indian Citation Index (ICI) is indexing 44 research journals published from India. Being multidisciplinary and applied science subject, number of journals indexed in ICI is relatively higher. The oldest journal in this category is 'Mausam' 1950, followed by 'Journal of Environmental Science and Engineering, 1959 and rest of the journals are as listed in Table.

**20 Fishery:** fishery is typically defined in terms of the “people involved, species or type of fish, area of water or seabed, method of fishing, class of boats, purpose of the activities or a combination of the foregoing features. Fishery is an area with an associated fish or aquatic population which is harvested for its commercial value. Fisheries can be marine (saltwater or sea water) or freshwater. They can also be wild or farmed. Indian Citation Index (ICI) is indexing 07 journals published from India in this subject category. ‘Indian Journal of Fisheries’, 1954. Rests of the journals are as shown below in Table.

**Table 4.1 (20) List of Journals of ‘Fishery’**

**21 Food and Beverage Science:** Food and beverage are eatables and drinkable items prepared and served to guests and customers. Generally food and beverage is the service of food made in the kitchen and drinks prepared in the bar to the customers (guests) at the food & beverage premises, which can be restaurants, bars, hotels, airlines, cruise ships, trains, companies, schools, colleges, hospitals, prisons,

takeaway, etc. In this category of subject, 'Indian Citation Index (ICI) is indexing 06 journals published from India. The oldest journal is 'Indian Food Packer', 1947 and rest are as given below in Table.

**Table 4.1 (21) List of Journals of 'Food and Beverage Science'**

**22 Forestry:** is the science and craft of creating, managing, using, conserving, and repairing forests and associated resources to meet desired goals, needs, and values for human benefit. Forestry in India is a significant rural industry and a major environmental resource. India is one of the ten most forest-rich countries of the world along with the Russia, Brazil, Canada, United States of America, China, Democratic Republic of the Congo, Australia, Indonesia and Sudan. In this subject category 08 research journals published from India is being indexed in 'Indian Citation Index (ICI) and among them 'Indian Forester (The)' 1875 is the oldest flag ship journal of forestry. Details of all its indexed journals are as given below in Table.

**Table 4.1 (22) List of Journals of 'Forestry'**

**23 General Science and Technology:** it is a mix of all aspects of science and technology. There are many journals which are multidisciplinary and cover all diverse aspects of science and technology, therefore, this subject category has been conceived in order to accommodate all such cases. In fact as a nature of science and technology, most S&T advances are governed by a structure of a connected triad basic research, technology development, and the involvement of society. Indian Citation Index (ICI) is indexing 20 such journals which are multidisciplinary in their coverage. The number of 20 journals in relative ratio is quite good. Out of 20 journals, 02 journals are continuing prior to independence of country, i.e. 'Current Science', 1932, and 'Indian Journal of Scientific and Industrial Research', 1942 and rest have come afterwards as shown below in Table.

**Table 4.1 (23) List of Journals of ‘General Science and Technology’**

**24 Health Science:** it is a conglomeration of applied science where group of disciplines of applied science dealing with human and animal health. There are two parts to Health Sciences: the study and research knowledge of health and the application of that knowledge to improve health, prevent and cure diseases, and understand how humans and animals function. It actively combines bio-medical, psycho-social, organizational and societal aspects of health, disease and health care. In this subject category ‘Indian Citation Index (ICI) is indexing 228 journals published from India. This is a large number in Indian context wherein 12 journals are publishing prior to independence, namely – ‘Indian Medical Gazette for the development of Medicine and Surgery’ 1866, ‘Antiseptic (The)’ 1904, Calcutta Medical Journal (The)’ 1906, Indian Medical Journal’ 1907, Nursing Journal of India (The)’ 1910, ‘Indian Journal of Medical Research’ 1913, Journal of the Indian Medical Association’ 1931, ‘Indian Journal of Pediatrics’ 1933, ‘Indian Journal of Surgery’ 1939, Indian Journal of Dermatology, Venereology, and Leprology’ 1940, ‘Journal of Association of Physicians of India’ 1945, and ‘Medical Journal Armed Forces India’ 1945. A list of all 228 journals is as given below in Table.

**Table 4.1 (24) List of Journals of 'Health Science'**

S.No.	Publication Name	Publication Start	
		Year	Print ISSN No.
1	AGEING & SOCIETY:THE INDIAN JOURNAL OF GERONTOLOGY	1990	0971-8060
2	AL AMEEN JOURNAL OF MEDICAL SCIENCES	2008	0974-1143
3	AMALA – RESEARCH BULLETIN	1982	0971-4987
4	AMITY JOURNAL OF BEHAVIOURAL AND FORENSIC SCIENCES	2005	0973-175X
5	ANIL AGRAWAL'S INTERNET JOURNAL OF FORENSIC MEDICINE AND TOXICOLOGY	2000	0974-6307
6	ANNALS AND ESSENCES OF DENTISTRY	2009	0975-8798
7	ANNALS OF CARDIAC ANAESTHESIA	1998	0971-9784
8	ANNALS OF INDIAN ACADEMY OF NEUROLOGY	1998	0972-2327
9	ANNALS OF NEUROSCIENCES	1994	0972-7531
10	ANNALS OF PEDIATRIC CARDIOLOGY	2008	0974-2069
11	ANNALS OF THE NATIONAL ACADEMY OF MEDICAL SCIENCES (INDIA)	1965	0379-038X
12	ANNALS OF THORACIC MEDICINE	2006	1817-1737
13	ANNALS OF TROPICAL MEDICINE AND PUBLIC HEALTH	2008	1755-6783
14	ANTISEPTIC (THE)	1904	0003-5998
15	ARYA VAIDYAN	1987	0970-4086
16	ASIAN ARCHIVES OF ANAESTHESIOLOGY AND RESUCITATION	1974	0301-0368
17	ASIAN JOURNAL OF OBS & GYNAE PRACTICE	2008	0971-8788
18	ASIAN JOURNAL OF PHARMACEUTICAL AND CLINICAL RESEARCH	2008	0974-2441
19	ASIAN JOURNAL OF TRANSFUSION SCIENCE	2007	0973-6247
20	BIOLOGY AND MEDICINE	2009	0974-8369
21	BIOMEDICAL RESEARCH	1990	0970-938X
22	BIOMEDICINE	1980	0970-2067
23	BOMBAY HOSPITAL JOURNAL	1959	0524-0182
24	BULLETIN OF MEDICAL EDUCATION & RESEARCH	2008	0302-2404
25	BULLETIN OF NATIONAL INSTITUTE OF HOMOEOPATHY	1998	0972-6276
26	BULLETIN OF THE INDIAN INSTITUTE OF HISTORY OF MEDICINE	1963	0304-9558
27	BULLETIN PGIMER	1966	0302-2404
28	CALCUTTA MEDICAL JOURNAL (CMJ)	1906	0008-0667
29	CARDIOLOGY TODAY	1997	0971-9172
30	CHRISTIAN MEDICAL COLLEGE, THE ALUMNI JOURNAL	1966	0009-5451
31	CHRONICLES OF YOUNG SCIENTISTS	2010	2229-5186
32	CLINICAL RHINOLOGY: AN INTERNATIONAL JOURNAL	2008	0974-4630
33	CONTEMPORARY CLINICAL DENTISTRY	2010	0976-237X
34	CURRENT MEDICAL TRENDS	1997	0972-3390
35	CURRENT NEUROBIOLOGY	2010	0975-9042
36	CURRENT PEDIATRIC RESEARCH	1996	0971-9032

S.No.	Publication Name	Publication Start	
		Year	Print ISSN No.
37	CURRENT TRENDS IN IMMUNOLOGY	1998	0972-4567
38	DEERGHAYU INTERNATIONAL	1985	0970-3381
39	DISABILITIES AND IMPAIRMENTS	1987	0970-356X
40	DRUG INVENTION TODAY	2009	0975-7619
41	EDUCATION FOR HEALTH	1988	1357-6283
42	ENDODONTOLOGY	1989	0970-7212
43	ETHNOBOTANY	1989	0971-1252
44	GANGA RAM JOURNAL (THE)	2011	2230-8946
45	GUJARAT JOURNAL OF OTORHINOLARYNGOLOGY AND HEAD AND NECK SURGERY	2004	0973-1024
46	HEALTH AND POPULATION - PERSPECTIVES & ISSUES	1978	0253-6803
47	HEALTHLINE	2010	2229-337X
48	HEPATITIS B ANNUAL	2004	0972-9747
49	HIPPOCRATIC JOURNAL OF UNANI MEDICINE	2006	0974-1291
50	INDIAN DRUGS	1964	0019-462X
51	INDIAN HEART JOURNAL	1949	0019-2610
52	INDIAN INTERNET JOURNAL OF FORENSIC MEDICINE & TOXICOLOGY	2003	0973-1970
53	INDIAN JOURNAL OF AEROSPACE MEDICINE	1954	0970-6666
54	INDIAN JOURNAL OF ANAESTHESIA	1948	0019-5049
55	INDIAN JOURNAL OF CANCER	1964	0019-509X
56	INDIAN JOURNAL OF CHEST DISEASES & ALLIED SCIENCES (THE)	1959	0377-9343
57	INDIAN JOURNAL OF CLINICAL BIOCHEMISTRY	1986	0970-1915
58	INDIAN JOURNAL OF CLINICAL PRACTICE	1990	0971-0876
59	INDIAN JOURNAL OF CLINICAL PSYCHOLOGY	1974	0303-2582
60	INDIAN JOURNAL OF COMMUNITY MEDICINE	1976	0970-0218
61	INDIAN JOURNAL OF COMPARATIVE MICROBIOLOGY, IMMUNOLOGY AND INFECTIOUS DISEASES	1979	0970-9320
62	INDIAN JOURNAL OF CONTINUING NURSING EDUCATION	2000	2230-7354
63	INDIAN JOURNAL OF CRITICAL CARE MEDICINE	1997	0972-5229
64	INDIAN JOURNAL OF DENTAL ADVANCEMENTS	2009	2229-5127
65	INDIAN JOURNAL OF DENTAL RESEARCH	1990	0970-9290
66	INDIAN JOURNAL OF DENTAL SCIENCES	2009	0976-4003
67	INDIAN JOURNAL OF DERMATOLOGY	1955	0019-5154
68	INDIAN JOURNAL OF DERMATOLOGY, VENEREOLOGY & LEPROLOGY	1940	0378-6323
69	INDIAN JOURNAL OF ENDOCRINOLOGY AND METABOLISM	1997	2230-8210
70	INDIAN JOURNAL OF FORENSIC MEDICINE & TOXICOLOGY	2007	0973-9122
71	INDIAN JOURNAL OF GASTROENTEROLOGY	1982	0254-8860
72	INDIAN JOURNAL OF GERONTOLOGY	1987	0971-4189

S.No.	Publication Name	Publication Start	
		Year	Print ISSN No.
73	INDIAN JOURNAL OF HEMATOLOGY & BLOOD TRANSFUSION	2006	0971-4502
74	INDIAN JOURNAL OF HOSPITAL PHARMACY (THE)	1964	0019-526X
75	INDIAN JOURNAL OF HUMAN GENETICS	1995	0971-6866
76	INDIAN JOURNAL OF LEPROSY	1983	0254-9395
77	INDIAN JOURNAL OF MEDICAL AND PAEDIATRIC ONCOLOGY	1980	0971-5851
78	INDIAN JOURNAL OF MEDICAL ETHICS	1993	0973-7081
79	INDIAN JOURNAL OF MEDICAL MICROBIOLOGY	1976	0255-0857
80	INDIAN JOURNAL OF MEDICAL RESEARCH (THE)	1913	0971-5916
81	INDIAN JOURNAL OF MEDICAL SCIENCES	1948	0019-5359
82	INDIAN JOURNAL OF MEDICAL SPECIALITIES	2010	0976-2884
83	INDIAN JOURNAL OF NATURAL PRODUCTS AND RESOURCES	2010	0976-0512
84	INDIAN JOURNAL OF NEPHROLOGY	1990	0971-4065
85	INDIAN JOURNAL OF NEUROTRAUMA (THE)	2004	0973-0508
86	INDIAN JOURNAL OF NUCLEAR MEDICINE	1986	0973-3919
87	INDIAN JOURNAL OF NUTRITION AND DIETETICS (THE)	1964	0022-3174
88	INDIAN JOURNAL OF OCCUPATIONAL & ENVIRONMENTAL MEDICINE	2003	0973-2284
89	INDIAN JOURNAL OF OCCUPATIONAL THERAPY	1955	0445-7706
90	INDIAN JOURNAL OF OPHTHALMOLOGY	1953	0301-4738
91	INDIAN JOURNAL OF ORAL SCIENCES	2010	0976-6944
92	INDIAN JOURNAL OF ORTHOPAEDICS	1967	0019-5413
93	INDIAN JOURNAL OF PALLIATIVE CARE	1994	0973-1075
94	INDIAN JOURNAL OF PATHOLOGY & MICROBIOLOGY	1958	0377-4929
95	INDIAN JOURNAL OF PEDIATRICS (THE)	1933	0019-5456
96	INDIAN JOURNAL OF PHYSICAL ANTHROPOLOGY AND HUMAN GENETICS	1975	0378-8156
97	INDIAN JOURNAL OF PHYSICAL MEDICINE AND REHABILITATION	1986	0973-2209
98	INDIAN JOURNAL OF PHYSIOLOGY AND PHARMACOLOGY	1959	0019-5499
99	INDIAN JOURNAL OF PHYSIOTHERAPY AND OCCUPATIONAL THERAPY	2007	0973-5666
100	INDIAN JOURNAL OF PLASTIC SURGERY	1968	0970-0358
101	INDIAN JOURNAL OF PREVENTIVE AND SOCIAL MEDICINE	1969	0301-1216
102	INDIAN JOURNAL OF PSYCHIATRY	1959	0019-5545
103	INDIAN JOURNAL OF PSYCHOLOGICAL MEDICINE	1978	0253-7176
104	INDIAN JOURNAL OF PSYCHOMETRY & EDUCATION	1970	0378-1003
105	INDIAN JOURNAL OF PUBLIC HEALTH	1957	0019-557X
106	INDIAN JOURNAL OF PUBLIC HEALTH RESEARCH & DEVELOPMENT	2010	0976-0245
107	INDIAN JOURNAL OF RADIOLOGY AND IMAGING (THE)	1991	0971-3026
108	INDIAN JOURNAL OF RHEUMATOLOGY	2006	0973-3698

S.No.	Publication Name	Publication Start	
		Year	Print ISSN No.
109	INDIAN JOURNAL OF SEXUALLY TRANSMITTED DISEASES	1980	0253-7184
110	INDIAN JOURNAL OF SEXUALLY TRANSMITTED DISEASES AND AIDS	2008	0253-7184
111	INDIAN JOURNAL OF SLEEP MEDICINE (THE)	2006	0973-340X
112	INDIAN JOURNAL OF SURGERY	1939	0972-2068
113	INDIAN JOURNAL OF THORACIC AND CARDIOVASCULAR SURGERY	1982	0970-9134

**26 Law:** is a system of rules that are enforced through social institutions to govern behavior and essential to maintain public order and rule of law in a society. Laws can be made by a collective legislature or by a single legislator, resulting in statutes, by the executive through decrees and regulations, or by judges through binding precedent. The formations of laws are largely influenced by a respective constitution of a country, written or tacit, and the rights encoded therein. The law shapes politics, economics, history and society in various ways and serves as a mediator of relations between people. 'Indian Citation Index (ICI)' currently indexing 06 journals published from India as shown in Table.

**27 Library and Information Science (LIS):** it is principally a social science subject accompanied by practical skills. Historically, traditions of public service, bibliography, documentalism, and information science have viewed their mission, their philosophical toolsets, and their domain of research differently. Library and Information Science (LIS) is a profession that is full of people passionate about making a positive change in the world. Library professionals bridge the gaps that exist between people, information and technology. LIS professionals work to design and develop knowledge-organization systems; create reader’s advisory resources to encourage young students to develop a lifelong love of reading and learning; help scholars to locate archival and other resources crucial to their work; identify and gather relevant information, skim that and serve to their clientele; help information seekers more quickly to locate information in critical situations; analyze and evaluate information sources, systems, and all stake holders of education and learning. Currently, LIS is an integration of library science and computer science in order of complimenting to each other. Indian Citation Index (ICI) currently indexing 19 journals published from India as shown below in Table.

**28 Management:** in businesses and other organizations is the function that coordinates the efforts of people to accomplish goals and objectives by using available resources efficiently and effectively. Management is often considered as a factor of production along with, machines, materials, and money. The basic task of management includes both marketing and innovation. Management consists of the interlocking functions of creating corporate policy and organizing, planning, controlling, and directing an organization's resources in order to achieve the objectives of that policy. In modern era management is significant aspect though it is relatively new subject of study for driving results. In India too it is gaining popularity and professionalism. Indian Citation Index (ICI) is currently indexing 36 research journals published from India in management as shown in Table.

**29 Material Science:** involves the study of the relationships between the synthesis, processing, structure, properties, and performance of materials that enable an engineering function. The properties of interest can be mechanical, electrical, magnetic or optical; the engineering function can impact industries involved in electronics, communications, medicine, transportation, manufacturing, recreation, energy, and the environment. While the field has evolved from materials formed from metals, ceramics, polymers and their various composites, in recent years there has been increasing focus on creating novel metastable nanostructured materials using, for example, routes inspired by nature. The new fields of nanotechnology and biomaterials are providing the materials scientist with an entirely new palette of molecular, organic, biological and inorganic building blocks to design and assemble nano-engineered materials with unique functionalities. In over a decade it has gain very significant role and, therefore, substantial number of journals have emerged world widely during this period. In India too a quite good numbers of journals have come up and accordingly 12 journals are being currently indexed in 'Indian Citation Index (ICI) as shown below in Table. It is also pertinent to mention that one of the journals published from India is over 95 years old i.e. 'Journal of the Institution of Engineers (India): Metallurgical and Materials Engineering Division Board, 1920.

**30. Mathematics:** is an old, broad, and deep discipline. It as a formal area of teaching and learning was developed about 5,000 years ago by the Sumerians. They did this at the same time as they developed reading and writing. Mathematics is an aid to representing and attempting to resolve problem situations in all disciplines. It is an interdisciplinary tool and language. In India ‘Mathematics’ as a discipline is there from ancient time. Currently ‘Indian Citation Index (ICI)’ is indexing 33 journals published from India as shown in Table.

**31. Meteorology:** the branch of science concerned with the processes and phenomena of the atmosphere, especially as a means of forecasting the weather. It is a study that dates to ancient times, when ancient civilizations made observations and kept records of weather conditions, both for agricultural purposes and out of a general curiosity about the world around them. Broadly, meteorology is more than the weather forecast. It is a complex and diverse science, interested in all aspects of the atmosphere. Indian Citation Index (ICI) is indexing 03 core journals published from India in the field of ‘meteorology’ as shown below in Table

**Table 4.1 (31) List of Journals of ‘Meteorology’**

**32. Nanoscience and Nanotechnology:** are the study and application of extremely small things and can be used across all the other science fields, such as chemistry, biology, physics, materials science, and engineering. There are only one journal in this area, probably being relatively newly emerged discipline, i.e. ‘International Journal of Nanotechnology and Applications’ 2007 as shown in Table.

**33. Oceanography and Marine Science:** Oceanography and Marine Science are the study of the earth’s oceans, the plants and animals that live in the ocean and how they interact within their natural environment. Oceanography and Marine Science is an interdisciplinary science integrating biology, chemistry, geology, physics mathematics, botany, zoology, meteorology and geography. Plants and Animals in the Ocean, Ocean Substances, Nutrients and Gases in Seawater, Marine Sediments, Plate Tectonics, Sea Motion, Tides and currents. Indian Citation Index (ICI) is indexing 05 journals of this discipline as shown in Table.

**34. Others:** In fact there is no subject category as ‘Other’ but the categorization of subjects in ‘Indian Citation Index (ICI) has been done based journals published. While subject categorization is done by taking journal’s coverage, scope and nature in account, it is found that there are few journals which do not fall in any subject category, therefore, all such journals are classed as ‘others’ for the sake of data organization in the database. Such journals are ten in number and their details are as shown below in Table.

**Table 4.1 (34) List of Journals of ‘Others’**

**35. Pharmacology and Pharmaceutical Science:** pharmacology is the study of drugs. It involves examining the interactions of chemical substances with living systems, with a view to understanding the properties of drugs and their actions, including the interactions between drug molecules and drug receptors and how these interactions elicit an effect. The Pharmaceutical Chemistry focus is on understanding the physical properties, chemical synthesis, manufacture, and formulation of medicines. In this discipline there are 67 quite good number of journals indexed in ‘Indian Citation Index (ICI) as shown in Table.

**36. Physics:** is one of the oldest academic disciplines, perhaps the oldest through its inclusion of astronomy. Over the last two millennia, physics has been a part of natural philosophy along with chemistry and biology with the nature and properties of matter and energy. Broadly subject matter of physics includes mechanics, heat, light and other radiation, sound, electricity, magnetism, and the structure of atoms. Indian Citation Index (ICI) is indexing 23 journals as shown below.

**38. Population Studies:** is broadly defined as the scientific study of human populations. Its major areas of studies are population dynamics; fertility and family dynamics; health, aging, and mortality; and human capital and labor markets. A population study is an interdisciplinary area of study; scholars from demography, epidemiology, sociology, economics, anthropology, and various other disciplines study populations. Indian Citation Index (ICI) currently indexing 03 journals as shown below in Table.

**39. Psychology:** is an applied and academic field that studies the human mind and behavior. Psychology studies to understand and explain how we think, act and feel. As most people already realize, a large part of psychology is devoted to the diagnosis and treatment of mental health issues, but that’s just the tip of the iceberg when it comes to applications for psychology. In addition to mental health, psychology can be applied to a variety of issues that impact health and daily life including performance enhancement, self-help, ergonomics, motivation, productivity, and much more. Indian Citation Index (ICI) is currently indexing 14 journals as is shown below in Table.

**40. Remote Sensing:** generally, remote sensing refers to the activities of recording/observing/perceiving objects or events at far away (remote) places. In remote sensing, the sensors are not in direct contact with the objects or events being observed. The information needs a physical carrier to travel from the objects/events to the sensors through an intervening medium. The electromagnetic radiation is normally used as an information carrier in remote sensing. The output of a remote sensing system is usually an image representing the scene being observed. A further step of image analysis and interpretation is required in order to extract useful information from the image. In a more restricted sense, remote sensing usually refers to the technology of acquiring information about the earth’s surface (land and ocean) and atmosphere using sensors onboard airborne (aircraft, balloons) or space borne (satellites, space shuttles) platforms. Currently, Indian Citation Index (ICI) is indexing only one journal of remote sensing as shown in Table.

**41. Rural Development:** is the process of improving the quality of life and economic well-being of people living in relatively isolated and sparsely populated areas. Rural development has traditionally centered on the exploitation of land-intensive natural resources such as agriculture and forestry. In Indian context this area of study becomes more significant because over 70% population depends or connected to rural establishments. Currently, Indian Citation Index (ICI) is indexing 04 journals as shown in Table

**42. Social Science:** is a major category of academic disciplines, concerned with society and the relationships among individuals within a society. It in turn has many branches, each of which is considered a “social science”. Basically, social sciences disciplines are many like economics, political science, human geography, demography, sociology, anthropology, archaeology, history, law linguistics and sociology. However, for the sake of building more granularities in Indian Citation Index (ICI), we have treated each of social science subject separately except a few which are classed in social science. Currently, Indian Citation Index (ICI) is indexing 74 journals as shown below in Table.

**43. Statistics:** the science of collecting and analyzing numerical data in large quantities, especially for the purpose of inferring proportions in a whole from those in a representative sample. Statistics can interpret aggregates of data too large to be intelligible by ordinary observation because such data tend to behave in regular, predictable manner. It is subdivided into descriptive statistics and inferential statistics. Currently, Indian Citation Index (ICI) is indexing 06 journals as shown below in Table.

**Table 4.1 (43) List of Journals of ‘Statistics’**

*Source: ICI, 2004 – 2014*

**45. Textile:** is a flexible woven material consisting of a network of natural or artificial fibers often referred to as thread or yarn. Yarn is produced by spinning raw fibers of wool, flax, cotton, or other material to produce long strands. Currently, Indian Citation Index (ICI) is indexing 08 journals as shown in Table.

**Table 4.1(45) List of Journals of ‘Textile’**

**47. Veterinary Science:** is the branch of medicine that deals with the prevention, diagnosis and treatment of disease, disorder and injury in animals. The scope of veterinary medicine is wide, covering all animal species, both domesticated and wild, with a wide range of conditions which can affect different species. Currently, Indian Citation Index (ICI) is indexing 18 journals as shown in Table.

**49. Zoology:** is the study of living organisms, specifically animals. It is a branch of biology that relates to the animal kingdom, including the structure, embryology, evolution, classification, habits, and distribution of all animals, both living and extinct, and how they interact with their ecosystems. They collect and analyze data in labs or outdoor environments. Currently, Indian Citation Index (ICI) is indexing 24 journals as shown in Table.
